BY FIELD MUSEUM PRESS

PREFACE

This work is the result of a series of activities, and its final scope was not anticipated for some years. In the course of some studies of bird morphology and related topics, about three thousand references were accumulated. During the preparation of a still unpublished monograph on bird anatomy, the problem of the form of publication of the bibliography was discussed with friends. From some of them came the suggestion that it be published separately so that it might be available to workers who might not possess the monograph. Later, a letter came from Dr. E. W. Gudger suggesting that the arrangement used in Bashford Dean's *A Bibliography of Fishes* be considered. I had not contemplated anything so ambitious as this, but was influenced to adopt some of its features, and gradually the scope of the work was extended.

The year 1926 was set, originally, as the limit of literature covered. As it became impossible to complete the work until some years later, other references were added as they came to attention, even as late as 1938. The comprehensive search ended with literature for 1926, however. That year was selected, partly through circumstances, but largely because *Biological Abstracts* began then.

As now presented, the titles are those relating especially to the field outside taxonomy; that is, anatomy, physiology, ecology, behavior, and related subjects. Taxonomy and distribution are not ignored, however, as especially important works have been included and bibliographies are listed. Paleontology is included except for titles preceding the publication in 1921 of Lambrecht's catalogue. Parasitology is largely referred to various excellent bibliographies, especially the *Index-Catalogue of Medical and Veterinary Zoology* of Stiles and Hassall.

It was not practicable to cover the vast field of poultry economics and management, but it is well represented. References to aviculture as found in general bibliographies usually were included, especially when they indicated work by scientific men. The migrations of birds are mentioned in the literature of all times, and the number of titles referring to this subject is exceedingly great. Many of the contributions are in the form of brief notes which are frequently of little or no scientific value. As articles on migration were noticed in bibliographies, those of more than one or two pages in length were selected, especially if they appeared in periodicals of some scientific standing.

It was not easy to select ecological references, because of the difficulty of deciding what are contributions to ecology. Articles written by ecologists were accepted, and titles sent by ornithologists which they classed as ecological were also accepted. A number of publications which have ecological bearings, though obviously not written with a clear-cut ecological viewpoint, were also included. All of these are indexed under ecology.

One of the most common ornithological topics is that of habits. A limited number of references to articles dealing with the habits of birds are included. These were selected usually from the standpoint of special interest and the scientific reputation of the periodical publishing them. There is no sharp border line between the literature dealing with habits and the literature of behavior as interpreted by animal psychologists. In the index, titles were classed under "behavior" when they appeared to have, in my judgment, the viewpoint of a trained student of animal behavior, or when they might be of interest to such a person. Items of general interest on the habits and behavior of birds occur in many general works on birds. The student who may be interested in a more complete bibliography of these topics than here attempted is referred to such publications.

In general, the probable use of a work like this was considered at all times in the selection of titles. It was recognized that it would be used mostly by investigators. Uncritical literature is of little or no value to them. However, the enormous number of publications that had to be considered required many swift decisions. A liberal policy was necessary to avoid the omission of contributions of possible value to some student. A less critical policy was followed with the older literature. References to articles on alleged hibernation of birds were included, for instance. As this work was in progress for a number of years, a strictly consistent policy was not possible. My viewpoint varied from time to time in spite of attempts to maintain a uniform policy.

Every one who has done much bibliographical work appreciates the difficulty of finding a large portion of the literature, even when the titles have been collected. No one library contains most of it, and not even all the libraries of any single country contain all of it. Fortunately, the *Union List of Serials in Libraries of the United States and Canada* appeared soon after the major portion of this work was begun. This was of incalculable value in locating periodicals in American libraries. However, a large amount of time was spent in finding rare periodicals not in this list and publications not in

serials. Inaugural dissertations and other privately printed pamphlets were especially troublesome. They often are not catalogued in libraries even though present in the stacks. By consulting catalogues of various American and European libraries, all but a very small number were located. Single publications often involved many hours of search and much correspondence. In order to save others this labor, it was decided to indicate the library in which each publication not commonly distributed in libraries was found. It was realized that this knowledge would not be so valuable for students outside of North America. Nevertheless, they may find the information useful in the case of rare publications. North American students can use the Union List for periodicals, but there are many references to serials which even the Union List does not locate. This practice of indicating libraries in which publications are located was used liberally, even for many that are to be found in a number of libraries contributing to the Union List, and especially for volumes issued before 1890. Though a majority of the publications listed are in Chicago libraries, thousands are not. It was necessary to make many trips to libraries in other cities, sometimes for extended periods.

Meager and inaccurate titles, especially when they refer to rare or obscure publications, are vexing and time-consuming. "Inflation" of them has involved consultations and correspondence with many librarians as well as examination of many lists of periodicals and numerous book catalogues. In order to save users of this bibliography from such troubles and yet secure the economy in space which abbreviations of the names of periodicals produce, it was decided to have a key list. Such a list, however, to be effective requires consistent use of these abbreviations.

Names of periodicals are variously abbreviated in different bibliographies, and no published list of serials contains all that are cited in this bibliography. A *World List of Scientific Periodicals* published during the years 1909-21 (Oxford University Press, Milford, London; 2nd ed., covering the years 1900-33) is the most complete. Its system (1st ed., primarily) is usually followed, and its rules for abbreviation (pp. 15-17) are applied to serials not included. It has not been practicable to recognize all recent changes in the names of cities and countries.

In the labor of checking the accuracy of the typed references, considerable use was made of "student service" engaged by the hour. Such helpers assisted in locating articles in bound volumes of periodicals and often in checking for accuracy. The catalogue cards were

left inserted in the volumes, saving me much time for my special work of noting the contents. At the same time, I decided whether the publication should be included. Brief notes were made on the cards for use in making up the subject index. These notes included references to genera when these were indicated in the publication. Much of this work was done in library stackrooms.

All reasonable efforts have been made to secure and check references to old or obscure publications that might have any possible use to the investigator. For the sake of economy in publication, however, existing bibliographies are used so far as possible, as for instance in the case of the literature of paleontology before 1921, already mentioned. Special bibliographies are mentioned in the subject index, and there is a list of general bibliographies. A list of abstracting journals has also been added.

Periodicals which are primarily or entirely ornithological are designated by an asterisk in the key list. Other ornithological periodicals not cited in the author catalogue occur in a list which follows. This second list includes many which have little value to the investigator, but which have the spirit of the true naturalist or may be useful in aviculture. Some of these, as well as others in the list of cited serials, were established by boys who later became trained investigators. My own first attempts at publication were in one of these uncited periodicals, *The Curlew*.

Acknowledgments are due to many persons for aid and interest. Numerous favors were received from librarians in all of the libraries cited. Special mention is made of frequent and exceedingly painstaking aid over a number of years from Miss Emily Dickinson, for many years librarian of the biology library of the University of Chicago, and to Mr. H. E. Mose of the John Crerar Library. Other librarians who deserve special mention for much help, especially by correspondence, are Miss Mary B. Cobb and Mrs. Caliste Crane Harris of the Boston Society of Natural History Library, Dr. H. M. Lydenberg and Mr. A. D. Osborn of the New York Public Library, Mr. F. E. Brasch of the Library of Congress, Miss Anne S. Pratt of Yale University Library, Mrs. E. M. Wilcoxson of Field Museum of Natural History, Miss Emma B. Hawks, United States Department of Agriculture Library, and Miss Hazel Gay of the American Museum of Natural History. Lists of bibliographical references for certain topics were sent to me by Dr. Witmer Stone, Mr. W. L. McAtee, and Dr. Walter Landauer, from which I obtained a number of items. Other persons to whom especial acknowledgment

is due for aid are: Dr. William Beebe, Captain Hugh S. Gladstone of Scotland, Mr. O. A. Hanke, Dr. Nagamichi Kuroda of Japan, Dr. Frederic T. Lewis, Dr. Harry C. Oberholser, Dr. T. S. Palmer, and the late Dr. C. W. Richmond.

It took about ten more years to complete this work than was estimated originally. More than two years were occupied largely in checking the manuscript for errors, and this involved much use of student service. Grateful acknowledgement is due Loyola University for the large amount of financial support given for this service.

To have Field Museum of Natural History as publisher was exceedingly gratifying and convenient. Its fine Edward E. Ayer Ornithological Library was useful in many ways during the eighteen years of active preparation of this work. For their cordial co-operation I am especially indebted to Mr. Stanley Field, President of the Board of Trustees of Field Museum; Mr. C. C. Gregg, Director of the museum, and his predecessor, Mr. Stephen C. Simms; to Dr. Wilfred H. Osgood, Chief Curator of Zoology; and to Mr. Rudyerd Boulton, Curator of Birds. During final preparation of the manuscript for publication, Mr. Boulton has assisted in revising the names of genera in the Subject Index. I wish also to acknowledge especially my great appreciation of the care and skill devoted to both manuscript and proofs by Miss Lillian A. Ross, Miss Josephine Thornton, and Mr. David Gustafson, of Field Museum's publication staff.

KEY LIST OF ABBREVIATIONS FOR PERIODICALS CITED.	17
LIST OF PERIODICALS NOT CITED BUT RELATING TO BIRDS.	73
AUTHOR CATALOGUE OF REFERENCES: A TO J	83

RULES AND SYMBOLS EMPLOYED

A. For economy in publication, titles have been more or less simplified. Words and punctuation marks have been omitted where not necessary. On the other hand, all details important in indicating the length of a publication and its illustrations have been included.

B. Authors' titles are arranged chronologically as to years and alphabetically as to publications within the same year.

C. Additions to titles or inserted explanatory words and translations of titles are included in brackets, [], parentheses being used only where they occur in original titles and as indicated in Paragraph E.

D. Rules of the American Library Association have been followed in transliteration of Slavic names except that transliterations in common use have been retained. Where more than one transliteration has been used commonly, the choice has been in favor of the major usage or the one resembling most closely the American Library Association form. In abbreviations of names of Slavic periodicals, ligatured diphthongs have been avoided. The *i* in every such diphthong has been retained, but the arc has been omitted.

E. References to periodicals have the name of the periodical, whether abbreviated or not, followed by a comma, and the volume number in bold-face type, followed by a comma. Series numbers are placed in parentheses, immediately preceding volume numbers. In the case of publications appearing in proceedings of societies, etc., with a date earlier than the actual date of publication, this earlier date is placed in parentheses immediately after the name of the periodical, and preceding the volume or series number. If no volume number occurs, this year number appears in bold-face type with no parentheses. The year of publication appears in bold face immediately preceding the title. This practice with reference to year of publication, title, etc., was not followed consistently in the accumulation of the first few thousand references, as its importance was not realized at the beginning. References which could not be verified are usually given as found in bibliographies, with few or no changes. Light-face roman type with no parentheses is used for the year of publication of other references to the same title.

F. Initial capitals in foreign languages are unaccented, as, for instance, *Etat* for *État*. The letter *e* has been substituted for German umlauts of initial capitals (e.g., *Ue*).

G. The library in which the publication was found during the procedure of verification is indicated by an abbreviation placed at the end of the reference after the illustrations, except for periodicals and books generally occurring in large libraries. This practice was followed liberally whenever it was deemed useful, and especially for years preceding 1890. The abbreviations used are those employed in the Union List of Serials, in the case of American libraries. The method followed in this list was used in preparing abbreviations for foreign libraries. The use of such abbreviations does not indicate that no other library has the publication. Many may have it. American workers will of course consult the Union List for possible location in a library more accessible than that indicated by the abbreviation.

H. Asterisks have been used for references acquired too late for personal examination or not accessible to the author. One asterisk * indicates that the reference was verified by a librarian through correspondence. Two asterisks ** are used for libraries described as having the publication but where verification was not made. Three asterisks *** indicate that the publication could not be located even after extensive search and correspondence. An asterisk has also been used to designate ornithological periodicals in the key list, and in the subject index to indicate especially important publications.

I. The following list of abbreviations is used to indicate libraries where publications were verified.

AW.	Universitätsbibliothek, Wien, Austria.
CaM.	McGill University, Montreal, Canada.
CS.	Leland Stanford Junior University, California.
CtY.	Yale University, New Haven, Connecticut.
CU.	University of California, Berkeley, California.
DA.	United States Department of Agriculture, Washington, D.C.
DKU.	Universitetsbiblioteket, Kjøbenhavn, Denmark.
DLC.	Library of Congress, Washington, D.C.
DSG.	Library of Surgeon General, Washington, D.C.
DSI.	Smithsonian Institution, Washington, D.C.
ELNH.	British Museum (Natural History), London, England.
ELZ.	Zoological Society of London, England.
FHU.	Universitetsbiblioteket, Helsingfors (Helsinki), Finland.
FrPBN.	Bibliothèque Nationale, Paris, France.
GB.	Stadtbibliothek, Breslau, Germany.
GF.	Senckenbergische Bibliothek, Frankfurt a. M., Germany.
HSG.	Private Library of Captain Hugh S. Gladstone, Dumfriesshire, Scotland.
IaSA.	Iowa State College of Agriculture and Mechanic Arts, Ames, Iowa.
IC.	Public Library, Chicago, Illinois.
ICF.	Field Museum of Natural History, Chicago, Illinois.
ICJ.	John Crerar Library, Chicago, Illinois.

ICU.	University of Chicago, Chicago, Illinois.
IEN-M.	Northwestern University Medical School, Chicago, Illinois.
IF.	R. Biblioteca Nazionale, Firenze, Italy.
IP.	R. Biblioteca Palatina, Parma, Italy.
IU.	University of Illinois, Urbana, Illinois.
IU-M.	University of Illinois College of Medicine, Chicago, Illinois.
JTU.	Tokyo Imperial University, Tokyo, Japan.
MB.	Boston Public Library, Boston, Massachusetts.
MBA.	American Academy of Arts and Sciences, Boston, Massachusetts.
MBM.	Boston Medical Library, Boston, Massachusetts.
MBN.	Boston Society of Natural History, Boston, Massachusetts.
MdBM.	Library of Medical and Chirurgical Faculty of the State of Maryland, Baltimore, Maryland.
MH.	Harvard College Library, Cambridge, Massachusetts.
MH-P.	Peabody Museum of Archaeology and Ethnology, Cambridge, Massachusetts.
MH-Z.	Museum of Comparative Zoology, Cambridge, Massachusetts.
MiU.	University of Michigan, Ann Arbor, Michigan.
MnRM.	Library of Mayo Clinic, Rochester, Minnesota.
MoSB.	Missouri Botanical Garden, St. Louis, Missouri.
N.	New York State Library, Albany, New York.
NCE.	Eugenics Record Office, Cold Spring Harbor, Long Island, New York.
NIC-A.	New York State College of Agriculture, Cornell University, Ithaca, New York.
NJP.	Princeton University, Princeton, New Jersey.
NN.	New York Public Library, New York City.
NNA.	American Geographical Society, New York City.
NNC.	Columbia University, New York City.
NNM.	American Museum of Natural History, New York City.
NNN.	New York Academy of Medicine, New York City.
Ober.	Private Library of Dr. H. C. Oberholser, Washington, D.C.
PPAN.	Academy of Natural Sciences, Philadelphia, Pennsylvania.
PPAP.	American Philosophical Society, Philadelphia, Pennsylvania.
PPWI.	Wistar Institute of Anatomy and Biology, Philadelphia, Pennsylvania.
PW.	Biblioteka Uniwersytecka, Warszawa, Poland.
RMS.	Private Library of R. M. Strong, Chicago, Illinois.
RPB.	Brown University, Providence, Rhode Island.
SB.	Schweizerische Landesbibliothek, Bern, Switzerland.
SSKB.	Kungl. Biblioteket, Stockholm, Sweden.
Storrs.	Storrs Agricultural Experiment Station, Storrs, Connecticut.
WH.	Library of Wisconsin State Historical Society, Madison, Wisconsin.
WU.	University of Wisconsin, Madison, Wisconsin.
WW.	Wheldon & Wesley's Catalogue of Ornithology.

J. The abbreviations used for names of periodicals cited have been taken from the *World List of Scientific Periodicals* where available. In the case of serials not in this list, the principles employed in it have been used except that abbreviations for Japanese periodicals have been taken, when available, from lists in the *Japanese Journal of Medical Sciences*. When not in these lists, abbreviations of Japanese periodicals have been copied as indicated in the

bibliographies from which they were obtained. In the key list of abbreviations which follows (pp. 19-82), periodicals cited more than once or twice are usually included. Especial care has been taken to insure explicitness with regard to the small number of periodicals which are in neither list.

K. The explanation of principles used in the abbreviations for names of periodicals has been taken verbatim from the World List (1st ed., vol. II, pp. ix-x) with minor changes and omissions.

Prepositions and articles normally are omitted. In abbreviations of English titles, capitals are used throughout. In other languages, nouns have capital, adjectives small, initial letters:

Bull[etin of the] Sci[entific] Soc[iety of] N[ew] Y[ork]
Publ[ications de la] Soc[iété] sci[entifique de l']Aisne

The conjunction "and" (with the corresponding words in other languages) is omitted except in titles consisting only of two nouns connected by "and," and where it connects broken compounds:

Field and Forest
Hannov[er] land- u[nd] forstw[irtschaftliche] Ver[eins] Bl[att]

Number is not distinguished (Bl.=Blatt and Blätter); neither is any distinction attempted in English between substantive and adjectival forms (Sci.=Science, Sciences, and Scientific). Where possible, cognate words in all languages are reduced to the same form:

Acad.=Academy, Académie, Academia
Ann.=Annals, Annales, Annalen, Annali
Sci.=Science, Scienza, Scienza
Soc.=Society, Société, Società, Sociedad, Sociedade, Societas, Societate, Societat

Normally the place of imprint is omitted (except when needed to distinguish periodicals with the same title); but when the abbreviated form would leave it uncertain what was the language of the original, the imprint is added for all except the best-known language of those between which confusion could arise, taking the order of familiarity as being (i) English; (ii) French; (iii) German; (iv) Italian or Spanish.

Prog. Sci. (without imprint)=Progress of Science, London
Prog. Sci. Paris=Progrès des sciences, Paris
Prog. Sci. Torino=Progresso delle scienze, Torino
Prog. sci. (without imprint, since there is no confusion with English)=Progrès scientifique, Paris
Prog. sci. Milano=Progresso scientifico, Milano
Ann. Biol. Paris=Annales de biologie, Paris
Ann. Chim.=Annales de chimie, Paris
Ann. Chem. Berl.=Annalen der Chemie, Berlin

In the Germanic and Scandinavian languages, where long compound words occur freely, the different parts of the compound have

been abbreviated as if they were distinct. With nouns no hyphen is used between the parts, but each part is made to begin with a capital letter:

EntwMech.=Entwicklungsmechanik

Compound adjectives are similarly contracted, but between the parts a hyphen is inserted:

Med.-chir.=Medizinisch-chirurgische

It is not considered necessary to give a list of the abbreviations, as most of them are self-explanatory, and reference can be made to the full form. Exception is made of the following German forms, some of which differ somewhat from those in common use:

Bl., Blatt	Mhft., Monatsheft	Mschr., Monatsschrift
Mbl., Monatsblatt	Schr., Schrift	Wschr., Wochenschrift
Wbl., Wochenblatt	Z., Zeitschrift	Ztg., Zeitung
Zbl., Zentralblatt		

A partial list of abbreviations for place names is as follows:

Aberd., Aberdeen	Engl., England	N.Z., New Zealand
Afr., Africa	Esp., España	Neb., Nebraska
Amer., America	Fr., France	Okla., Oklahoma
Amst., Amsterdam	s' Grav., s' Gravenhage	Ont., Ontario
Ariz., Arizona	Ind., India	Penn., Pennsylvania
Aust., Australia	Ire., Ireland	Phila., Philadelphia
B. Aires, Buenos Aires	Ital., Italia	Qd., Queensland
B.C., British Columbia	Kans., Kansas	R.I., Rhode Island
Belg., Belgique	Kbh., Kjøbenhavn	S. Afr., S. Africa
Berl., Berlin	Lond., London	S. Aust., S. Australia
Bgham., Birmingham	Lpool., Liverpool	Spb., St. Petersburg
Brux., Bruxelles	Mad., Madrid	Scot., Scotland
C.G.H., Cape of Good Hope	Manchr., Manchester	Stockh., Stockholm
Calif., California	Mass., Massachusetts	Tasm., Tasmania
Can., Canada	Mex., Mexico	Tex., Texas
Carol. Carolina	Mich., Michigan	Trin. Tob., Trinidad and Tobago
Colo., Colorado	Minn., Minnesota	
Conn., Connecticut	N.J., New Jersey	Vict., Victoria
Deuts., Deutschland	N.S.W., New South Wales	Wash., Washington
Edinb., Edinburgh	N.Y., New York	Wis., Wisconsin

L. References with the same title but to different periodicals are listed together without repetition, as is done in the *Catalogue of Scientific Papers* compiled by the Royal Society of London. Reviews and abstracts are usually treated in the same way, being placed after the reference to the publication reviewed or abstracted. The name of the reviewer or abstracter does not appear ordinarily.

M. Vernacular names are not usually employed in the Subject Index. The name of the probable genus is substituted instead. Thus *Gallus* is used for "common fowl," German "Huhn" or "Hühnchen," French "poulet," Italian "pollo," and so on. In case some species of *Gallus* other than *domesticus* is mentioned, the species is

indicated. *Columba* is used for "dove," "pigeon," "Taube," etc. The common house sparrow, *Passer domesticus*, appears as *Passer*. Generic names have been taken as given without revision, except in the Subject Index. In the case of group names, e.g. Galliformes, the system of nomenclature used in Wetmore's (1934) revised system has been employed.

N. A limited use has been made of the asterisk in portions of the classified index to designate publications of unusual importance. The asterisk is used more often for comprehensive works, but is sometimes employed for relatively short papers when these are considered to be especially important. As a rule the importance of a publication was judged from the standpoint of value as an original contribution to knowledge. Recognition is given, however, to works of an encyclopedic character. The asterisk has not been used for works involving birds only incidentally, no matter how important they may be.

O. Information concerning the period of publication and location in libraries can be obtained from the *Union List of Serials in Libraries of the United States and Canada* by Winifred Gregory (New York, H. W. Wilson Co., 1, 1927+) and *Poole's Index to Periodical Literature* (Boston and New York, Houghton, Mifflin and Co., 1, 1893+). The following publications give useful information concerning some journals not in the Union List.

(1) American Newspaper Annual, N. W. Ayer and Son's Directory of Newspapers and Periodicals. A Guide to Publications Printed in the United States and Possessions, the Dominion of Canada, Bermuda, Cuba, and the West Indies (Philadelphia, 1, 1881+). ICJ.

(2) Christian Gottlob Kayser's Vollständiges Bücher-Lexicon ... 1750-1910 (Leipzig, C. H. Tauchnitz, 36 vols. in 33, 1834-1912). ICJ.

(3) Willing's Press Guide and Advertiser's Directory and Handbook A Concise and Comprehensive Index to the Press of the United Kingdom (London).

(4) The following work is useful in furnishing data concerning periodicals: Gesamtverzeichnis der ausländischen Zeitschriften (Gaz.), 1914-1924. Auskunftsbureau d. deuts. Bibliotheken, Berlin Preussische Staatsbibliothek, 1929.

The contents of current numbers of various ornithological periodicals are given in *The Auk* since 1884, and in *The Ibis* since 1896, more completely since 1922. This has also been done to a variable extent by the *Wilson Bulletin* since 1926, by *The Emu* since 1923, by *Bird-Lore* since 1901, and by *Bird-Banding* since 1930. The *Wilson Bulletin*, since 1929, has furnished useful information concerning the place of publication, officers, etc. Detailed information concerning a number of rare publications more or less devoted to ornithology is given by Frank L. Burns in "A Bibliography of Scarce or Out of Print North American Amateur and Trade Periodicals Devoted More or Less to Ornithology" (*Oologist*, 1915, 32 [Suppl.], No. 7, 32 pp.) and by Wm. J. Fox in "A List of American Journals Omitted from Bolton's 'Catalogue of Scientific and Technical Periodicals, 1665-1895.'" *Bull. Bibliography* (1908), 5, 82-85. These lists include some journals not entirely devoted to ornithology which are not mentioned in this work.

PRINTED IN THE UNITED STATES OF AMERICA
BY FIELD MUSEUM PRESS

PREFACE TO VOLUME II

This work has been done with the perhaps Utopian ambition to secure completeness within the limits indicated in the subtitle and on page three of the preface to volume one. Nevertheless, in spite of laborious efforts, omissions have occurred, for which only apologies can be offered.

Grateful acknowledgment is made to Field Museum for having provided excellent and specially trained editors and proofreaders. Mr. David Gustafson, formerly Professor of Printing at the Carnegie Institute of Technology, Pittsburgh, began work on the project in October, 1937. His fine knowledge of languages and of printing problems has been invaluable, and his keen and loyal interest in the undertaking has been greatly appreciated.

Before the appointment of Mr. Gustafson, Miss Josephine Thornton did excellent work on some of the galley proofs for the second volume.

Strenuous efforts have been made to avoid errors. Nevertheless, some errors, mostly typographical, have occurred. For example, the list of periodicals with abbreviations employed, on pages 17 to 72, does not include some journals cited only a few times in the manuscript; these citations were added after the list had been completed. A section of Corrigenda will appear in volume three.

Much time has been spent, especially during the past five years, in securing biographical material for the authors cited. This has often been difficult to obtain, and it could not be secured for many of the authors without a prohibitive amount of correspondence. Where feasible, full names of authors have been given, although this procedure often involves the danger of misidentification. Some of these names were kindly contributed by Dr. T. S. Palmer and others. *American Men of Science* (and other directories), the Wistar Institute Bibliographic Service, the bibliography of vertebrate zoology by Dr. Casey A. Wood (to be listed in volume three), and the index to *The Auk* were important sources for this information.

Volume three will consist mainly of the subject and finding indices. There will also be a list of bibliographies and the section of Corrigenda mentioned previously. It is estimated that this volume will be somewhat larger than either volumes one or two. The manuscript has long since been completed and proofreading is in progress. It is expected that the usefulness of the Author Catalogue will be largely dependent on the Subject Index.
